

1. Output hasil running program

No.	Tugas	Hasil dan Dokumentasi
1	Case pertama (ip camera hp terhubung dengan webcam laptop)	
2	MQTT (Hp mengirim text ke python)	

		 The screenshot shows a Python IDE with a project named 'PyCharmMqttProj'. The code in the editor is for an MQTT client that connects to a server at 'mqtt.dalibawa.com' on port 1883. It subscribes to a topic and prints received messages. The terminal window shows the execution output, including the IP address '192.168.1.100' and the message 'Kali Linux: 192.168.1.100'.
3	Mengirim pembacaan webcam laptop (ada dan tidak ada tangan) ke aplikasi Hp	 The two photographs show a laptop with a smartphone connected to its webcam. The top photo shows the laptop screen displaying a video feed of a person's face. The bottom photo shows the laptop screen displaying a video feed of a hand. The smartphone is connected to the laptop via a cable, and the video feed is being streamed to the phone's screen.
